

OUR DOCTORS FIRST TO RECEIVE NEW JORDY

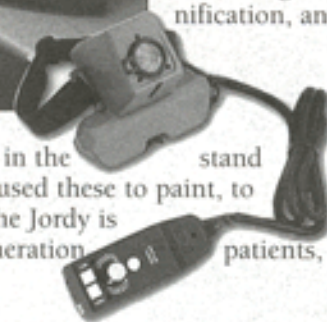

In late September 1999, the Jordy was introduced to the public on Good Morning America. A few days later our practice was the first in the world to receive the Jordy. The Jordy offers a number of advantages for our low vision patients, and is particularly helpful for macular degeneration patients.

Jordy is a CCTV that can be worn on the head or used in a stand like a traditional CCTV. It can be used with a battery to allow portability. The Jordy can be used to see at a distance or near. It can be used at church, a sporting event or to watch television. It can be used to perform artwork, crafts and other near to intermediate activities. When worn on the head, the Jordy can magnify up to 24X using LCD screens mounted in the system. The patient can adjust the magnification, and view in full color, white on black or black on white contrast.

it can be used in the stand patients have used these to paint, to real value of the Jordy is macular degeneration

When placed in the docking stand and connected to a TV, the magnification is limited only by the size of the television. Jordy can be taken to ballgames, to the office or to a movie. At home or work, connected to a monitor to read and write. Worn on the head, our play bingo, cards and just to see the faces of grandchildren. The that it can be used in so many ways. This has great benefit to our patients, since one device can help them perform many different tasks.

VIDEO MAGNIFICATION CENTERS OFFER PATIENTS MANY OPTIONS

An important part of our low vision centers are the Video Magnification Centers we have developed within each facility. The latest in CCTV/video magnification and computerized eyewear is available. Since we are not limited as some dealers are to one product line, we are able to select the best devices from each company.

Our Technology Centers include the latest from Enhanced Vision Systems, the Jordy, Max, and Maxport, Telesensory's Aladdin, Ovac's ZACC, Innovention's Magnicam and Magnicam Triad, PVA, and Optelec CCTVs. We search for and add new technology continuously. We were the first in the country to receive the new PVA, Personal Vision Assistant, a new CCTV system our doctors helped to design. We will also be among the first in the country to receive the new Flipper system.

What does this mean for our patients? It means our patients can test a variety of the latest and best CCTV systems. This assures they make the right decision in obtaining electronic low vision technology. We also feel it is important that the doctor, who understands their visual problems, provide guidance to the patient in making the decision. All of our CCTV systems come with either a 30 or 60 day full refund policies. This takes the risk out of selecting any CCTV system.

FEATURING OUR PATIENT ...

ON CBS NEWS

On February 18, 2000, Dan Rather's Eye on America segment of the CBS Evening News featured our patient, Martha Gevers. Martha was one of the first patients we fit with the new Jordy System. Though profoundly visually impaired, Martha's Jordy now allows her to see the faces of her friends and lets her perform her duties as a rehabilitation teacher.

Dr. Windsor first tested the system on Martha during a seminar Dr. Windsor and Dr. Fettig were conducting at Indiana University/Purdue University in Fort Wayne. She was later evaluated by Dr. Windsor at the Vision Rehabilitation Clinic in Fort Wayne. Martha had been a patient of Dr. Windsor for many years and also uses a Designs for Vision Microscopic bifocal and a conventional CCTV. Martha's response to the Jordy was amazing. Though she had used other low vision devices, the Jordy allowed her to do and see things that none of the other systems could. Certainly the gift of sight is among the greatest gifts a friend can receive. We are grateful to be able to be part of such technological miracles.

For more information on Jordy, please e-mail us at: richw@eyeassociates.com.
